Medical Center Patient Queuing System

Queue Plus

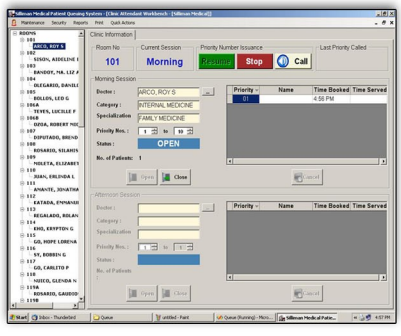
Kiosk Screen

- Experiencing the hassle of manually listing patients' names?
- Going through the stress of scratching off canceled appointments?
- Having to individually call patients into the doctor's office?

Display Screen

"Take that load off doctors' secretaries and clinic attendants because... Patient queuing has just become easier, faster, and more efficient at the least effort."

Clinic Attendant Screen



Queue Plus System is a software that automates and systematizes the issuance of priority numbers in medical centers. It centralizes patient queuing for all of the doctors' clinics and makes use of voice interface to call out priority numbers. All a patient has to do is proceed to the Kiosk, and with just a few touches on the screen, a priority card will be printed out. The patient can then just relax at the lobby and wait for his/her number to be called. What more, Queue Plus has provisions for comprehensive printable reports on the lists of patients.

Although Queue Plus is high technology, it was designed in such a way that it would be easy for everyone to use. For sure both the clinic attendant and the patient will have no problems operating the system.

Satisfied with your hospital's services? Make it even better! Get a hold of Queue Plus!
